## Computer Basics

### What is a Computer?

A computer is an electronic device that accepts data, processes it, stores information, and produces useful output.

### Main Parts

Common parts include the CPU, monitor, keyboard, mouse, speakers and storage devices.

### Input and Output

Keyboard and mouse are input devices. A monitor and speakers are output devices.

### CPU

The CPU processes instructions and controls many operations of the computer.

### Activity Preparation

Before doing an activity, identify three input devices and three output devices around you.
