

DK LEARNING

GRADE 2

Computer Parts & Digital Safety

Level: **Starter+** • Purpose: Learn before you practise

[← BACK TO LEARNING WEBSITE](#)

In this guide

1. Input Devices
2. Output Devices
3. Storage: Keeping Files Safe
4. Strong Passwords
5. Safe Behaviour Online
6. Practice questions, answers and glossary

How to use this guide

Read each chapter slowly. Look at the example, then try the “Your turn” task **without copying**. Write your own notes on the lines. When you finish, answer the practice questions and check your work with the answer page. After that, open the Grade 2 activity on the website.

Learning goals

- Sort devices into input and output
- Explain what storage is and name examples
- Create a safe password idea
- Know what to do about strange messages

Study plan

Step	What to do
1	Read the chapter and highlight key words
2	Study the worked example
3	Do the “Your turn” task on paper or on a computer
4	Write a short summary in your own words
5	Answer the practice questions, then check

Tip: Try to teach one thing from this guide to a friend or family member. Teaching is the best way to learn.

1 Input Devices

Input devices send information into a computer. A keyboard sends letters, a mouse sends pointer movements, a microphone sends sound and a camera sends pictures.

Without input devices, we could not tell the computer what to do.

Key points

- Input = information going in
- Keyboard, mouse, microphone, camera, scanner
- Touch screens are input devices too
- Input devices are used by people

Worked example

Voice message:
You speak into the microphone (input).
The computer records your voice.

Your turn

Look around your home. Write three input devices you can find.

Check yourself

Explain each term in your own words:

Input device

Microphone

My notes

2 Output Devices

Output devices show or produce results from the computer. A monitor shows pictures, speakers and headphones play sound, and a printer prints on paper.

Some devices do both jobs. A touch screen shows information (output) and also accepts touches (input).

Key points

- Output = results coming out
- Monitor, speakers, headphones, printer
- Touch screens do input and output
- Output is what we see, hear or hold

Worked example

You type a story (input).
You print it (output).
The paper is the output.

Your turn

Draw an arrow chart: keyboard -> computer -> monitor. Mark input and output.

Check yourself

Explain each term in your own words:

Output device

Printer

My notes

3 Storage: Keeping Files Safe

Storage keeps files so we can use them later. Computers store files on hard drives and SSDs. We can carry files on USB drives or memory cards. Files are things like pictures, songs and school work.

When the computer is turned off, saved files stay in storage. Work that is not saved can be lost.

Key points

- Storage keeps files for later
- Examples: SSD, hard drive, USB drive, memory card
- Always save your work
- A folder keeps related files together

Worked example

Create a folder named My School Work.
Save a drawing named House inside it.

Your turn

Make a folder called My School Work and save one file inside it.

Check yourself

Explain each term in your own words:

Storage

USB drive

My notes

4 Strong Passwords

A password protects your account like a lock. A strong password is long, private and hard to guess. Do not use your name, birthday or 1234. Use a mix of words, numbers and symbols.

Never send a password in a chat or give it to a stranger. Do not write it where everyone can see.

Key points

- Make passwords long and private
- Do not use name, birthday or 1234
- Never share with strangers
- Use a different password for each account

Worked example

Weak: dilshan2015

Better: BlueMango!Rain7

Your turn

Create a password idea using three random words and a number. Do not tell anyone!

Check yourself

Explain each term in your own words:

Account

Strong password

My notes

5 Safe Behaviour Online

Some messages can be tricky. A stranger may ask for your address, photos or password. A message may say you won a prize. These can be unsafe.

If a message feels strange, stop. Do not reply, do not click links, and tell a trusted adult. It is always okay to ask for help.

Key points

- Stop and think before you click
- Do not reply to strangers
- Never share home address or password
- Tell a trusted adult

Worked example

Message: Send me your password to win a game!

Correct action: Do not reply and tell a trusted adult.

Your turn

Write what you would do if a stranger asks for your address online.

Check yourself

Explain each term in your own words:

Stranger

Link

My notes

Practice Questions

Part A - Choose the best answer

1. Which is an input device?
 - A) Mouse
 - B) Monitor
 - C) Speaker
2. Which is an output device?
 - A) Keyboard
 - B) Printer
 - C) Mouse
3. What can store a file?
 - A) USB drive
 - B) Chair
 - C) Headphones
4. A strong password should be...
 - A) your name
 - B) private and hard to guess
 - C) 1234
5. A stranger asks for your password. You...
 - A) send it
 - B) tell a trusted adult
 - C) post it
6. A microphone is used for...
 - A) sound input
 - B) printing
 - C) storing

Part B - Short answers

1. Give one example of an output device.

2. Why do we save files?

3. Name one thing a strong password should NOT include.

4. What should you do with a strange message?

Answer Page

Part A

1-A 2-B 3-A 4-B 5-B 6-A

Part B (sample answers)

1. Monitor, speaker, printer or headphones.
2. So we can use our work later.
3. Your name, birthday or 1234.
4. Do not click or reply; tell a trusted adult.

Mini glossary

Input device	A device that sends data into a computer
Microphone	An input device for sound
Output device	A device that shows results from a computer
Printer	An output device that prints on paper
Storage	A place where files are kept
USB drive	A small portable storage device
Account	Your personal space on a website or computer
Strong password	A long password that is hard to guess
Stranger	A person you do not know
Link	A click-able address that opens a web page

Activity Preparation

Make an input / output / storage chart for ten devices and solve five short safety questions. Then open the Grade 2 activity.

Think before you start

- Explain one important idea from this grade in your own words.
- Give one real-life example where this topic is useful.
- What mistake could a beginner make, and how can it be prevented?
- Write the steps you will follow before starting the Grade 2 activity.

Ready checklist

- | | |
|---|--|
| ☐ I read every chapter | ☐ I tried the “Your turn” tasks |
| ☐ I understand the key terms | ☐ I checked my practice answers |
| ☐ I wrote my own notes | ☐ I am ready for the activity |
